Primary Examiner, Art Unit 2873

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art does not show or fairly suggest the claimed invention of a variable focus lens package and related method of manufacturing, having the claimed structure and claimed limitations, wherein a rejection under 35 USC 102 or 103 would be improper. Please particularly note the combination of claimed elements and claimed limitations, including as recited in claim 1, a variable focus lens package comprising a plurality of optical elements in a light path, which plurality of optical elements comprises: a fluid optical element in a fluid chamber comprising a first fluid and a second fluid, which are non-miscible, and which are in contact over a meniscus, wherein a shape of the meniscus is variable under the application of a voltage to an electrically conducting surface of the fluid chamber; a non-fluid optical component, of which fluid optical element and which non-fluid optical element at least one is a lens, wherein the non-fluid optical component is constructed from a substrate that comprises a transparent portion in the light path, and from a molded surface layer that is present at a side of the substrate facing away from the fluid optical element and further comprises alignment means for alignment of the lens package with further lenses; and as recited in claim 11, a method of manufacturing a variable focus lens package comprising a plurality of optical elements in a light path, which plurality of elements comprises: a fluid optical element in a fluid chamber comprising a first fluid and a second fluid, which are non-miscible, and which are in contact over a meniscus, wherein a shape of the meniscus is variable under the application of a voltage to an electrically conducting surface of the

Art Unit: 2873

fluid chamber; a non-fluid optical element, of which fluid and non-fluid optical element at least one is a lens, in which method a plurality of such packages are made simultaneously with the steps of: assembling a carrier comprising a plurality of cavities filled with at least one of said fluids to a substrate with transparent portions for each of the light paths, which substrate has a molded surface layer that includes the non-fluid lens and alignment means for alignment with further lenses, and separating said plurality of lenses into individual variable focus lenses packages. This configuration of claimed elements and claimed limitations, as well as the method steps of the method, provide a first object of the invention to provide an variable focus package that can be assembled more easily, and a second object of the invention to provide a method that reduces the amount of tolerance in the manufacture and hence improves the lens quality. It is noted that the prior art reference to Feenstra et al (WO 03/069380 A1), notably Figure 4, was used in a prior art rejection of the related PCT. However, upon review of the rejection and the Feenstra et al reference, the rejection was considered incorrect, especially in light of 35 U.S.C. 112, 6th paragraph. The claimed limitation to the "alignment means" plus the recited function invokes an interpretation of the claim language as directed by 35 U.S.C. 112, 6th paragraph, i.e. what the Applicant recites in the specification as their alignment means. Therefore, in light of the specification teachings, the "glare stop (116)" of Feenstra et al's invention, as applied by the PCT rejection, can not be read on the "alignment means" of the presently claimed invention, as interpreted as directed by 35 U.S.C. 112, 6th paragraph.

Therefore, the claimed invention is considered to be in condition for allowance as being novel and nonobvious over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered. Please note that the PCT search report was considered to the extent the references are listed on the PTO-892.

Drawings

3. The drawings were received on 6-3-08. These drawings are approved.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
